

LPL44

REMOTE LOW PASS LEVEL CONTROL

This Subwoofer/Bass gain control is a radical new development from the "Crazies" at Phoenix Gold's R&D Department. It slices, it dices, and it's the coolest thing since Phoenix Gold Amps. This little gem provides convenient secondary woofer output level control. Now, you too can blow out your window seals from the comfort of your own front seat.

This diagram is provided to assist the custom installer with non-standard installs. **Note:** Swapping the black and yellow wires allows the knob to operate backwards (turn counter-clockwise to increase level, clockwise to decrease it).

HOW IT WORKS

This LPL44 kit includes a 50K Ω potentiometer with mounting hardware. The kit is designed for a sandwich-type dash mount with a maximum thickness of 1/2" or underdash mounting with supplied hardware. After mounting the unit in the desired location, run the supplied 20 foot cable to the signal processor or amplifier and plug into the port labeled "LPL" or "Remote Lowpass Level".

Still have questions? If you do, whether about the LPL44 or any other Phoenix Gold product, don't hesitate to give us a call at (503) 288-2008.
